New face for Bank Burgenland

Special features and challenges

The façade erected when the building was constructed in 1980 was demolished and rebuilt using a completely new construction method.

The quality and dimensions of the uncovered shell were very poor. Accordingly, the façade design had to be based on the natural dimensions. When anchoring the façade elements, many details had to be developed with special static solutions.

Scope of services

A total of 2,000 m² of Alucobond louvre cladding, 1,700 m² of ribbon windows and 600 m² of mullion-transom façade were installed. In addition, 20 entrance elements and E130 interior doors were installed.

Impressions

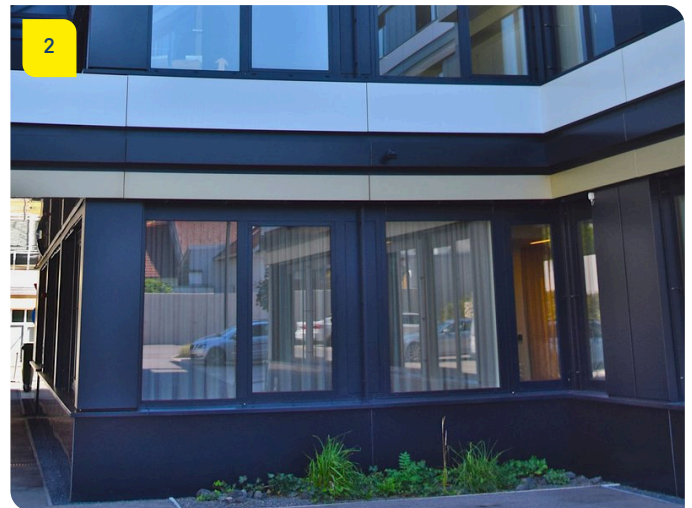

Image notes

1

Modern façade as the centrepiece.

Thanks to the new façade of Bank Burgenland in Eisenstadt, the building impresses with its modern appearance and light-flooded interior.

2

Extensive façade construction.

The mullion-transom façade with Alucobond louvre cladding gives the building its urban character.
