Green power from the metropolis

The construction of the Freudenau Danube power station marked another step forward in the utilisation of hydro power, a renewable, environmentally friendly and cost-efficient source of energy. Furthermore, this multi-purpose facility solves Vienna's water management problems, yields urban development improvements, optimises shipping and increases the recreational value of the entire region, without significantly affecting the Danube ecosystem.

Impressions

Image notes

1

Freudenau Danube power station.

The multi-purpose facility significantly contributes to improving Vienna's water management problems.

2

The water storage area after completion.

The water storage area after completion

3

Freudenau Danube power station.

The construction site for Vienna's Danube power station was a technical, organisational and logistic challenge.
