Flood defences providing high-quality leisure time.

Furthermore, we removed and newly constructed the two existing weir systems. The so-called Pfannl Weir as a stone ridge weir and the Oser Weir as a boulder ramp. To uphold the stream continuum, we incorporated fish ladders into the weir/ramp structure.

Urban development measures and adequate planting significantly increased the Krems River's leisure time and recreational value as an urban river system. The architectural design elements along the riverside path include benches, tables, contact areas and boulders made from precast concrete parts.

Impressions

Image notes

1

Krems River Flood Defences.

The Oser weir was realised as a ramp made of stone blocks.
