Comprehensive paving with precise execution

The entire outdoor area was paved with granite in a mix of colours – a proven solution that impresses with its high durability, weather resistance and ease of maintenance. At the same time, the natural stone paving gives the forecourt a timeless and elegant look that blends harmoniously with the existing architecture and the surrounding landscape.

A special design feature of this project is the segmented arch pattern, which combines granite stones of different colours. This laying pattern creates a lively, high-quality appearance and underlines the precision of the craftsmanship. The paved area was complemented by an epoxy resin joint filler, which provides additional stability, reduces moisture penetration and minimises maintenance requirements in the long term.

Thanks to its non-slip surface, the granite paving is ideal for high-traffic areas such as entrances and forecourts. With regular maintenance, the surface will retain its attractive appearance for many years and remain resistant to dirt, moisture and mechanical stress.

Image notes

1

Aesthetically pleasing forecourt

With segmented arch paving in a colour mix, epoxy resin joint filling and a roundabout for the tree, the forecourt unfolds its full aesthetic effect.

© Bernhard Rogen

2

Colourful paving mix

The segment arch paving was laid in Manga granite red, basalt, Roriz 7/9, Porto 7/9, granite yellow 6/8 and sealed with an epoxy resin joint filler.

3

Timeless seating area

The paving, made from different types of granite stone, was laid in a circular pattern as a design element for the seating area.
